

Detection of Water Levels

APPLICATION:

Use a series of EE-SPX613 sensors as sight-glass gauge in water processing and semiconductor and commercial applications. They are used in de-ionized water systems and small-scale water purification systems.

FUNCTION:

The EE-SPX613 sensors strap onto clear 6 to 13 mm diameter using tie wraps. They detect water and other clear aqueous liquids in tanks or can detect an opaque float. The bank of sensors in the example detects minimum and maximum levels as the water vapor tank.
